

Meadow Creek Interceptor Upgrade Landscape Restoration Update

The spring planting season ends on May 31, 2011 and Branders Bridge Landscaping is currently working to install plantings along the completed sewer easement in the area of the Meadowcreek Parkway.

The fall planting season begins on October 1st and Branders Bridge will be onsite promptly to continue landscape restoration in the Greenbrier neighborhood and other completed areas along the project. Notification of upcoming planting will be given to property owners with individual landscape restoration plans in September to allow ample time to coordinate the placement of the trees and shrubs.

As replacement of the sewer interceptor continues, the completed easement areas will continue to be seeded and sodded to establish a groundcover to help prevent erosion throughout the upcoming summer months.

RWSA is continuing to work with the landscape architects at Williamsburg Environmental Group to address any restoration issues that are arising during construction and answer questions from affected property owners. If you have questions about the planned restoration in your immediate area, you can contact Tamara Ambler at 977-2970 ext. 197 or at tambler@rivanna.org.
